

Curation of dataset publication is support, not just about control.

18th International Digital Curation Conference in February 2024

Dieuwertje Bloemen, Productmanager RDR & Lirias (dieuwertje.bloemen@kuleuven.be)

 Perception of Curation

 Review dashboard

 How can we continue to work on the perception of curation?

Curation @ KU Leuven

Curation @ KU Leuven

 KU Leuven's institutional data repository (Dataverse-based)

 Launched in January 2022 with review/curation phase on FAIRness, metadata, documentation & license choice

 Strong focus on ensuring researchers are fully informed and supported

- Curation is key in growing the researchers' RDM confidence
- Helps teach FAIR and data sharing best practices

KU Leuven RDR reviews (first 2 years)

- Knowledge is transferrable. Use institutional set-up as training ground.
- Researchers are unlikely to make the same mistake twice.

Perception of Curation

Perception issues

- 🎓 Review can feel intimidating, the results/impact is clear.
 - Change perception by focussing on support, not just the fix
 - Clear messaging during training sessions: *“review phase is there to support you, not to judge your work”*

- 📘 Streamlining our curation workflow
 - Free up more time for support
 - Creation of a review dashboard

Review dashboard

Purpose

- Track who reviews what (avoid overlap)
- Simplify reviews and potentially automate some work
- Enable unified advice/messaging
- → Free up time for more personalized support, training & consultation

Key features

- Assignment of reviewers & auto-assignment for returning datasets
- Checklist of items to review & notes field
- Autogenerated feedback based on checklist
- Storage tracking
- Logs to retain the history of a dataset's review phases
- Uniform messaging & easy follow up of communication

Publish or return dataset

Lijkt me inderdaad in orde, buiten het ontbreken van de readme-file. Description kan misschien wel iets uitgebreider. Het lijkt ook dat er een publicatie aan gelinkt is (dat mogelijk nog niet gepubliceerd is). Titel kan eventueel vermeld worden bij 'related publication' met de vermelding 'submitted for review'

Feedback

Write feedback email for creator

1. A README.TXT file is missing. For more information go to https://www.kuleuven.be/rdm/en/rdr/manual#Documentation

2. The description could be longer. We typically expect at least three sentences, with it being a summary that describes the purpose, nature and scope of the dataset.

3. As this is replication data, it's a good idea to add a related publication. If the publication is not published yet, you may just write "submitted for review".

If you have any questions or need further support, please let us know by responding to this message or contacting the RDM helpdesk at rdm@kuleuven.be. Once you've made the necessary changes, you can resubmit for review and we'll check again.

Kind regards,
Laura Bervoets

If you wish to respond to this email, make sure to keep the original subject to ensure it gets sent to the original reviewer.

✕ Clear 🔄 Generate from Checklist

If there are issues, the dataset should not be published.
